

DNS Suffix Change Mac OS X

How to change DNS suffix to view Web sites by typing in alias name versus absolute address on command line in browser (example: to get to "TNS" Web site by simply typing tns instead of http://tns.sdsu.edu)

Click on the **Apple > System Preferences**
Under **Internet & Network** click on **Network**
Highlight **Built-in Ethernet** and click on **Configure...**
Select the **TCP/IP** tab
In the **Search Domains** field type **sdsu.edu**
Click **Apply Now**
Close the Network Window
